

Celebration as EVRSafe ISS-1040 wins at IBEX and MET'S

EVRSafe have certainly had an eventful 2007. Winning both the METS design award and the IBEX innovation award was an unprecedented success.

Since winning these awards the ISS-1040 Integrated toxic gas safety system has attracted an increasingly high level of interest all around the world.

EVRSafe have now secured distribution agreements throughout the US and have recently appointed PLASTIMO as the distributor for Europe. EVRSafe are currently distributing to 105 countries worldwide.

The US and Europe have taken to the product largely due to the high number of deaths relating to toxic gasses on board. In the US alone, 750 deaths are reported and in Europe 660 deaths, relating to CO (Carbon Monoxide) poisoning annually.

New developments

Due to increased demand in the US, EVRSafe will be opening an office in Fort Lauderdale, FL early in 2008.

Look out for EVRSafe in 2008.

EVRSafe's patented sensor locking system

The multi-award winning EVRSafe ISS-1040

EVRSafe invests heavily in the future of manufacturing

Capping off a year of achievements following the launch of the ISS-1040, a number of US government departments have shown interest in the way the ISS software communicates through to the unit sensors. We are currently securing agreements with these departments who will be supporting the development of a number of specifically and specially designed new products.

As part of our commitment to producing innovative products, the company have invested heavily in manufacturing plants to enable products to be produced in mass quantities to meet demand. For consumers, this means that in 2008 the ISS-1040 and our new products will be available in more locations on demand.

Look out for EVRSafe in 2008.

The Dubai International Boat Show will be the scene of the world launch of our newest product, the ISS-1040t. Now not only an integrated toxic gas detection system, the ISS-1040t has the ability to call your cell phone if a problem occurs onboard and also includes a tracking device for security reasons with a positional report of your vessel.

Enjoy peace of mind that your vessel is safe no matter where you are.

EVRSafe have been approached by a number of fire-control system manufacturers to apply the ISS-1040 technology to fire management systems. We are currently working through our UL ratings to release the product to the world market for fire suppression.

This is an exciting step as it will give us the ability to implement the product into large super-yachts and shipping control rooms.
